PROFILE

Computer Engineering student who builds and delivers software used by real clients. I developed a full-stack ERP system that an auto repair shop now uses every day, and a B2B marketplace app published on the App Store and Google Play. I have hands-on experience in web development (Next.js, TypeScript, PostgreSQL), mobile development (Flutter, Kotlin, Firebase) and embedded systems (STM32).

WORK EXPERIENCE

Freelance Full-Stack Developer — Uğur Oto (Auto Service ERP), Ankara
August 2026 – September 2026

- Developed a web-based **ERP system** covering vehicle intake, work orders, inventory, accounts, cash, invoicing, inspection and **30+ reports**; in daily use since Sep 2026.
- Designed a **41-table PostgreSQL** database with Prisma; built role-based permissions and conflict-safe document numbering.
- Migrated **767 customers, 844 vehicles and 727 parts/labor records** from the shop's old MS Access database without data loss.
- Gathered requirements with the shop staff and managed the project end to end, from development to delivery.

Technologies: Next.js, React, TypeScript, PostgreSQL, Prisma, Vercel | github.com/ismetguler/oto-servis-erp

Erciyes University Computer Research and Application Center (BAUM) — İŞKUR Student Program
November 2025 – June 2026

- Developed a **notification and information-management REST API** for university systems, improving the data flow between backend services and mobile clients.
- Worked with the technical team on university IT infrastructure, software/hardware inventory and support processes.

EDUCATION

Erciyes University — Computer Engineering 2023 – Expected Graduation: 2028 (3rd Year)
GPA: 3.19 / 4.00
Foreign Language: English (B2)

PROJECTS

Ticaret Camı — Commercial Project (Sold & Delivered)

- Developed a turnkey **B2B marketplace** for a private client; ownership and source code were transferred on delivery.
- **Flutter & Firebase** — built real-time features such as live map tracking and dynamic product management.
- Managed the publishing process on **Google Play and the App Store** end to end; rated **5.0★** on the App Store.

Teknofest Rocket Competition — Arfesa Aerospace Club (September 2025 – June 2026)

- **STM32** — designed the data flow processes of an STM32-based avionics system.
- Reduced sensor noise by **25%** and improved data accuracy through **Kalman Filter** integration.
- Achieved **15%** efficiency in data throughput by processing multiple sensor streams simultaneously over **SPI and I2C**.

City Master & Turkey Map — Mobile Game

- **Kotlin and Firebase** — developed a geography-based data model and interactive game mechanics.
- Reached **900+ users** on the Google Play Store.

Lie Detector AI — Mobile Biometric Analysis System

- **Google ML Kit** — built facial tracking and micro-expression detection combined with camera and **PPG** sensor data for stress analysis.
- Reached **100+ users** on the Google Play Store.

SKILLS

Programming: TypeScript, JavaScript, Java, C, C#, Python, Dart, Kotlin, SQL
Web & Backend: Next.js, React, PostgreSQL, Prisma, REST API, Tailwind CSS
Mobile: Flutter/Dart, Android Studio/Kotlin, Firebase (Authentication, Firestore, Cloud Functions)
Embedded Systems: STM32, FreeRTOS, Kalman Filter, Sensor Fusion, SPI, I2C, UART
Tools: Git, GitHub, Vercel, Android Studio, STM32CubeIDE
